

# 401 Flush Pull Handles

## For Sliding & Folding Doors

Brio 401 Flush Pull Handles are thoughtfully crafted to complement our range of folding and sliding door hardware. With a minimalist aesthetic and versatile functionality, these handles are the perfect choice for modern interiors.

The handle features an offset recess to provide better purchase on the pull-open side, making it especially effective for sliding doors equipped with soft-close units, where initial resistance is encountered upon opening.

Ideal for folding doors where the stack folds inwards or where hinge handles are not suitable. 401 Flush Pull Handles are designed to match seamlessly with our flush bolts, ensuring a cohesive and polished look across all visible hardware.

Can be routed in so that the faceplate sits flush with the door for a streamlined appearance, or the faceplate can sit slightly raised for added emphasis.

Perfect for pocket door systems where locking functionality is not required, offering a sleek and practical solution.
