

Single Run 60

Internal Top Hung Sliding System

Single Run 60 is a simple to use sliding door system for residential and light commercial use suitable for internal doors up to 60kg, both for internal doors and wardrobes.

With an aluminium top track, nylon wheels with sealed bearings and an optional softclose divide, the system is extremely reliable, quiet and smooth to operate.

Bottom guidance options include a full length channel in the floor with door mounted guides, a floor mounted guide that runs in a sawcut groove in the bottom of the door, or a wall mounted roller guide running in an inverted channel within the bottom of the door. A captive guide set requiring no door preparation is also available.

We can also offer 2 hanger variants, a standard option that works best in conjunction with a pelmet, or a zero headroom option that allows for a very small 3mm gap between top of door and bottom of track, ideal for recessed track applications.
